2019

Before we start

- Please take photos and tweet them under **#psdayuk**. You can also tag me with **@nohwnd**.
- I have stickers, come grab some afterwards.
- I will be around the whole day, and would love to talk with you.

2019

What is this
talk about?

What is this talk about?

- Testing is simple but without any experience it's difficult to start testing.
- Practical patterns to apply to existing code.
- An intermediate talk to fit in between "Introduction to Pester" and "Pester internals".
- Become the driver of the change in your team. 

How do you identify what to test?

- Find parts of the code that are giving you the most problems and cover them with tests.
- Start slow in multiple places rather than focusing on full code coverage of a single part.
- Repeatedly check if your tests are giving you benefits.
- Aim for tests that cover a lot, but are not brittle.
 - For example e2e tests on my recent project vs. unit tests on my Assert project.

demo time!
